

ERIC SALERNO

TECHNICAL PROGRAM MANAGER — AGENTIC AI SYSTEMS, PLATFORM DELIVERY & HARDWARE/SOFTWARE INTEGRATION

Woodinville, WA · esalerno86@gmail.com · linkedin.com/in/ersalerno · Open to Remote / Hybrid (Greater Seattle)

SUMMARY

Technical Program Manager with ~30 years spanning senior full-stack engineering, TPM, and Director-level delivery — with a working, hands-on command of AI. Designs and ships agentic systems in Python, works directly in SQL and production data, and drives hard cross-functional programs to a date. At Amperity, personally designed and built a two-part AI-assisted integration system (Python + Claude) that cut integration build time ~90% while owning the connector program end-to-end and shipping 24 production connectors. Track record of zero-to-one platform delivery across domains — PlayReady DRM at Microsoft, an Epic healthcare data-exchange partnership at Press Ganey, scalable data platforms at Accolade — plus a recent portfolio of AI applications and a home-hardware project that ties together device reverse-engineering, a Python control platform, and an AI agent that writes the integration code. Fluent with engineers, partners, and executives alike.

CORE STRENGTHS

Agentic AI & multi-agent orchestration · AI-assisted / agent-driven development · LLM orchestration, RAG & human-in-the-loop design · Technical program management (cross-org, zero-to-one) · Python · SQL · API & platform product management · Hardware/software integration & protocol reverse-engineering · Data platforms & pipelines (ETL/ELT, warehouses) · Partner / third-party integration & API contracts · Technical specs & architecture trade-offs · Executive & board-level communication · FastAPI · REST/OpenAPI · MCP servers · Jira / Jira Align

PORTFOLIO

learnpath-agent — Adaptive AI Learning-Path Application

2026 · github.com/ericthebigsal/learnpath-agent

Full-stack FastAPI application (Jinja2, SQLite, real accounts/auth) where an LLM plans a personalized learning sequence from a stated goal and re-plans after every quiz result, always showing its reasoning. Every model call is dependency-injected so the full test suite runs offline against a mocked client, and the planner falls back automatically to a deterministic rule-based path if the API call fails or rate-limits.

AI-Assisted Martech Integration Builder

2026 · github.com/ericthebigsal/agent-integration · Live: ericthebigsal.github.io/agent-integration

Public, working agentic integration demo that proves the pattern shipped at Amperity: OpenAPI spec in → behavioral enrichment → human-in-the-loop review → MCP tool generation → live API verification, against real Klaviyo and HubSpot APIs. FastAPI backend on Render, GitHub Pages frontend, 17-test suite with live API coverage.

Raspberry Pi Home Audio Platform — Hardware / Software / Agentic Integration

2026 · github.com/ericthebigsal/Dumb-home

Unified multi-zone control platform for a home audio system — two Marantz SR5014 AV receivers and an AudioControl M4800 4-zone amplifier — running always-on on a Raspberry Pi. **Reverse-engineered the M4800's undocumented HTTP/JSON control API** from its web interface (power, per-zone volume/trim, mute, source routing, temperature telemetry) and wrote Python control modules plus a Streamlit/FastAPI app for single-pane control across all devices. Built an **AI “systems investigator” agent** (Gemini, GitHub Actions) driven by an externalized lateral-thinking prompt with 3-stage failover, operating human-in-the-loop to probe device protocols and generate control and setup code — a concrete example of an agent doing the integration engineering, not just answering questions.

EXPERIENCE

Independent AI Consultant / Technical Advisor

Jun 2026 – Present · Remote · (also 2024 – 2025)

- Design and build agentic AI systems hands-on: multi-agent orchestration, MCP server generation, tool-interface design, and autonomous-vs-human-in-the-loop workflow architecture — from spec through working, tested, deployed code.
- Shipped multiple production-style AI applications end-to-end (see Portfolio): a FastAPI adaptive learning platform, a live multi-platform integration builder, and a Raspberry Pi hardware-control platform with an agent-assisted development workflow.
- Advise early-stage and growth-stage teams on technical architecture and program strategy; translate ambiguous goals into buildable technical plans with clear API contracts and scope boundaries.

Amperity — Technical Product Manager

Feb 2025 – Jun 2026 · Remote / US — Enterprise Customer Data Platform (CDP) & Data Activation

- **Designed and built a two-part AI-assisted integration system** (Python + Claude) — a human-in-the-loop discovery pipeline plus a dockerized execution engine — cutting integration development time **~90% (≈4 weeks → ~2 days)**, validated at **85% compatibility** against the existing production integration library.
- **Owned the connector/destination activation program end-to-end** — demand intake, requirements, engineering hand-off, release tracking, adoption reporting — authoring **300+ tracked work items and 59+ integration specs in ~16 months** and **shipping 24 connectors to production** (12 batch, 12 real-time).

- Built **30+ reusable AI/automation tools and MCP servers**, plus **6 mock third-party APIs** (FastAPI) as validation and test harnesses, letting the team scope agent-driven integrations against credential-gated partners without live access.
- Drove platform bets from concept through spec — self-serve connectors, a connector SDK, real-time streaming connectors — partnering with senior engineers on architecture and scope.
- Shipped production data apps (Streamlit/Snowflake, SQL-backed) giving leadership real-time visibility into delivery, adoption, and program health.
- Automated request intake so a customer request becomes a dev-ready spec and engineering ticket in **~1 hour, down from ~1 week**.

● **Press Ganey — Senior Director, Technical Program Management**

Mar 2022 – Aug 2024 · Greater Seattle — promoted from Distinguished TPM; reported directly to the CTO

- **Spearheaded a flagship data-exchange and API-integration partnership with Epic** — the dominant U.S. EHR — delivering MyChart and Cheers CRM integration milestones, and serving as primary relationship owner across both organizations' senior leadership.
- Led the **FedRAMP compliance feasibility analysis** and drove an ROI-based no-go recommendation through to an actual executive decision, saving significant misdirected investment.
- Led **technical due diligence and integration strategy across several acquisitions**, presenting roadmaps and trade-offs to senior leadership and the board.
- **Built the company's TPM discipline and career ladder from scratch** across multiple engineering orgs — a net-new function — working directly with the CTO.
- Drove org-wide adoption of a standardized **Agile/SDLC toolchain (Jira, Jira Align)** and built the executive KPI-reporting layer under it.

● **Accolade — Director of TPM / Technical Product Manager**

Mar 2017 – May 2022 · Seattle, WA — promoted from individual-contributor Technical Product Manager to Director

- Built a **scalable healthcare data platform and pipelines** (ingestion, processing, storage) underpinning core product capabilities, under HIPAA compliance constraints throughout.
- Owned a multi-year **CRM migration program** (Microsoft Dynamics → custom in-house) for a 50+ person workforce, via a phased pilot-then-scale rollout with continuous data-integrity validation.
- Led a team of **4–5 Technical Program Managers** owning all data ingress/egress across the platform; drove **multi-year technical unification** following two healthcare acquisitions.

● **Amazon — Senior Technical Program Manager**

Oct 2014 – Jul 2015 · Seattle, WA

- Built data-driven fraud detection and customer segmentation systems for Amazon Coins (digital currency), using a customer-experience-first approach to a high-stakes trust problem.

● **Microsoft — Senior Program Manager**

Jan 2004 – Oct 2014 · Redmond, WA

- Designed the initial APIs and shipped the **PlayReady DRM platform** (Windows 8, Silverlight 2/3/4) — a true zero-to-one platform with Tier-1 third-party adoption; served as PlayReady's technical representative to industry-standards initiatives.
- Led **Xbox One anti-piracy and hardware-security** programs, coordinating silicon, firmware, and vendor teams and driving third-party penetration testing — deep hardware/software integration under strict release timelines.
- Early in tenure: product owner and PM for an internal Microsoft Consulting Services knowledge platform; hired and managed a **20+ person offshore development and testing team** (Bangalore).

● **Appature — Technical Program Manager**

Nov 2012 – Sep 2013 · Seattle, WA — martech startup, acquired by IMS Health

- Owned the platform APIs for a Marketing Relationship Management SaaS on AWS, used by customers, internal developers, and Customer Success; drove integration into SnapLogic's visual designer to reduce adoption friction.

● **Earlier Experience**

- **Concur Technologies — Program Manager:** grew from individual-contributor developer to dev lead to PM; supported Fortune-500 customer engagements.
- **EDS / General Motors — Product Manager / Developer / Test:** early ASP web-app adopter; earned MCP, MCSD, and MCT certifications.

EDUCATION

University of Michigan — B.S., Industrial & Operations Engineering

Michigan Technological University — Engineering

CERTIFICATIONS

AI/ML Foundations (Neural Networks · Machine Learning · Thinking Machines) · Recommendation Systems with Python ·

Predictive Analytics & Data Mining · (legacy) Microsoft Certified Professional / Solution Developer / Trainer (MCP / MCSD / MCT)
